

# CoachWeb *Becoming a Data Partner*

---

## Improve information on coaches on your own IT systems

---

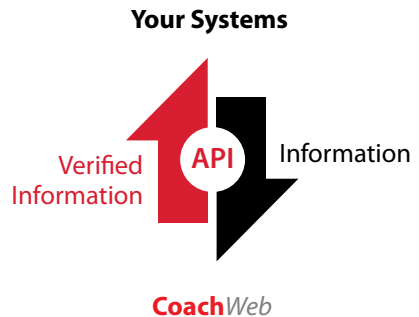

The Data Partner access is designed to allow organisations in sport to receive and share information between CoachWeb and custom databases and I.T. systems.

Data Partners gain access to verified, up-to-date and quality assured information on CoachWeb from in-house and custom built applications.

### How does CoachWeb work for Data Partners?

A central principle of CoachWeb is to make the data available to partners beyond the bounds of the web based system. This is made possible with a web service API that allows external systems to read and write information to and from CoachWeb.

The web service is already successfully embedded with partners and offers a scalable route to share information within the sports network.

### What are the benefits of integrating your organisation with the CSPs?

The gain for national organisations is to receive “grass-roots” information relating to their sport from the CSPs and open up a local communication channel to the coaches via CSPs, LA and SSPs.

- Easier publication of training courses into the CSP network
- Improve access to coaches via a locally branded medium
- Receive live data updates from the wider sports network
- Deal with CSPs through a single system (rather than 49 different ones)
- Provide a link with CSPs to validate qualifications and licences easier

### What are the benefits of integrating your organisation for the CSPs?

In addition to improved information sharing with Data Partners, CSPs, receive the operational benefit of accessing data inputted en-masse by Data Partners.

- Receive up-to-date lists of qualifications directly from the governing bodies
- Updated lists of programmes on which coaches participated
- Automatically receive syndicated event and course information
- Reduce the “spreadsheet-swapping” between partners
- Reduce admin in shifting content from national to local websites
